- Reading assignment for this slide set: my notes

Recursion

- A recursive function
  - makes one or more calls to itself (recursive calls),
  - has a base case where the recursive calls end, and
  - the value of at least one of the parameters is moving toward
    the base case, so that recursion can eventually terminate.

- See ReadnRec.java
- See Recur.java
- See BinSearch.java, Search.java, ArrayTools.java
