1 Times and Locations

- Lectures: Tuesday and Thursday 1:00pm–2:20pm in Melville Library W4530.
- Recitation (mandatory): Tuesday 2:30pm–3:25pm in Melville Library W4530.
- Office hours: Office Hours: TBA.
- TA: TBA <tba@tba>.
- TA Office Hours: TBA.

2 What This Course is About

Motivating Questions

- What is computation?
- What counts as a computer?

Primary Goal of Course

Develop a theory out of the idea of computation that is

- clean and simple,
- mathematically rigorous, and
- general.

Other Course Goals

- Understand the beautiful theoretical foundations of computer science.
  - Hint: it’s not this: “Oh you’re a computer scientist. Can you fix my computer? You must be a wiz with MS Excel.”

- Learn how some of these ideas can be applied in other areas of CS.
  - While a particular programming language will eventually become outdated, what you learn in CSE 350 always be relevant.
• Help you think rigorously when you go out in the field.\textsuperscript{1}
• Improve your mathematical skills.
• Learn techniques for succeeding as a computer scientist, student, and researcher.

3 How to Do Well in This Class
• Study. This is advanced material, which requires effort to digest.
• Do all the problem sets seriously.
• Go over lectures and lecture photos several times. (E.g., recopy your notes.)
• Best way to study for exams: Redo \textit{all} the old problem sets and old exams \textit{from scratch}.
• Work with a partner. Work in a group.
• Don’t get lost. If you are having trouble or falling behind, please come see me.
• Come to office hours.
• Start the homework early.
• When you don’t understand something, ask questions in class immediately.

4 By the end of the course, you should have....
• An ability to define and use abstract models of computation such as finite and push-down automata, and analyze their relative expressive power.
• An ability to define, use, and convert between abstract machine models and formal languages.
• An understanding of the power and inherent limitations of algorithmic computation.

5 Prerequisites
• Mathematical maturity.
• Some programming background/undergraduate algorithms class.

6 Requirements
• One final.
• One midterm.
• 5-7 problem sets. (Every 1-2 weeks.)

\textsuperscript{1}Story from former students. At the time they thought that Theory of Computation was just theory. But they use it all the time in the field.
# 7 Problem Sets

- Do problem sets in latex.
- Put an example/picture for each problem.
- Hand in both the PDF and a tarball/zipfile of the source. Hand in problem sets electronically. If the TA also wants hard copies, then please submit these as well.
- It is your responsibility to keep copies of all work that you hand in.
- Late assignments will not be accepted.
- If you work with people or have any other sources, you must cite them.

**Problem-Solving Procedures on Homework**

- Cite everyone that you work with.
- You must write up all your solutions yourself.
- You can share ideas, but it is academically dishonest to share any part of your writeup.
- It is academically dishonest to get your solution from any other student’s writeup.
- Don’t try to Google solutions. It’s not worth it. You may obtain the answer but you won’t learn very much. You will get seriously burned if you are caught plagiarizing.
- If you learn the answer to one of your problems from a book or from the web, then you must cite. You will get burned if you search for answers on the web, rather than trying to solve them.
- For more details, see the assignment on academic dishonesty.

# 8 Camera

- We’ll take photos of everything I write on the chalkboard. Then I’ll post on Blackboard.
- Some days I’ll forget my camera. If you have a camera, please bring it to serve as a backup. I’ll be grateful.

# 9 Grading

- Homework, attendance, and participation will be worth approximately 15% of the grade, the midterm will be worth approximately 35% of your grade, and final will be worth approximately 50% of your grade. I reserve the right to adjust this formula for generating raw scores by a small amount (e.g., 5%-7%).
- You get 25% of any question in an exam by saying I don’t know.
10 Dates

- One possible date for the midterm is Tuesday, April 3, 2018. The advantage of this date is that it’s after most of your other midterms. the disadvantage is that it’s late—after the add-drop date. We’ll discuss other possibilities in class.

- The final exam schedule is here: http://www.stonybrook.edu/commcms/Registrar/registration/exams.php. According to this website, our exam takes place on Tuesday, May 15, 2018 from 2:15pm–5pm.

11 Books

There is no required textbook for this course. Recommended textbooks include:

- *Elements of the Theory of Computation* by Harry R. Lewis and Christopher Papadimitriou.

You can also look at other online courses for extra material.

12 Academic Integrity

Each student must pursue his or her academic goals honestly and be personally accountable for all submitted work. Representing another person’s work as your own is always wrong. Suspected instances of academic dishonesty will be reported to the CEAS Committee on Academic Standing and Appeals. More comprehensive information on academic integrity, including categories of academic dishonesty, can be found on the Academic Judiciary’s web site at http://www.stonybrook.edu/uaa/academicjudiciary/.

- I take academic honesty *very* seriously. Infractions have serious consequences.
- It is *your* responsibility to ensure that you understand what constitutes academic dishonesty.
- Always cite! If you work with multiple people, cite with whom you worked.
- You can work together to solve problems, but you must write up your own solutions. Do not share your solutions with anyone ever.
- It is academically dishonest to hand in a solution that you don’t understand.
- See the academic integrity assignment for more details and more explanation.
13 Americans with Disabilities Act

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact Disability Support Services, ECC (Educational Communications Center) Building, Room 128, (631) 632-6748. They will determine with you what accommodations, if any, are necessary and appropriate. All information and documentation is confidential.

Students who require assistance during emergency evacuation are encouraged to discuss their needs with their professors and Disability Support Services. For procedures and information go to the following web site: http://www.ehs.sunysb.edu and search Fire Safety and Evacuation and Disabilities.

14 Critical Incident Management

Stony Brook University expects students to respect the rights, privileges, and property of other people. Faculty are required to report to the Office of Judicial Affairs any disruptive behavior that interrupts their ability to teach, compromises the safety of the learning environment, or inhibits students’ ability to learn. Faculty in the HSC Schools and the School of Medicine are required to follow their school-specific procedures.

Further information about most academic matters can be found in the Undergraduate Bulletin, the Undergraduate Class Schedule, and the Faculty-Employee Handbook. If you have any questions, please contact Donna Di Donato in the Office of Undergraduate Academic Affairs (2-7080).

15 Scribing

If students want to scribe lectures in latex, please let me know. You will get some extra credit for the scribing, but not enough to make it worthwhile just for the grade. It’s worthwhile because of the experience doing technical writing.

If multiple students scribe the same lecture, then just the best set of scribe notes gets extra credit.
