VISUALIZATION IS NOT NEW

RICH HISTORY

Let's go back some 160 years to 1854, London, England

NEWSFLASH, 1854

The most terrible outbreak of cholera which ever occurred in this kingdom, is probably that which is taking place in Broad Street, Golden Square, and adjoining streets.

Within two hundred and fifty yards of the spot where Cambridge Street joins Broad Street, there are upwards of five hundred fatal attacks of cholera in ten days.

The mortality in this limited area probably equals any that was ever caused in this country, even by the plague; and it is much more sudden, as the greater number of cases terminated in a few hours.

WHAT CAN WE DO?

WHAT IS THE CAUSE?

HOW CAN WE ELIMINATE IT?

TIME FOR "IMAGINATION"

John Snow

PROVED THE HYPOTHESIS

Hypothesis: cholera spreads through water

- and not via some other fantastic causes
- one said it rose out of the burying grounds of plague victims from two centuries earlier
- the bacteria was discovered later, in 1886

A real-life experiment (often the case with observational data)

- established the mode of cholera transmission
- and consequently the method of prevention: keep drinking water, food, and hands clear of infected sewage

Visualization provided

- inspiration
- convincing arguments to justify actions
- led to Dr. John Snow's historic immortality
- a bar near the old Broad Street pump bears his name (safe drinking)

ASSUME YOU'RE A NASA MANAGER

Given the information provided in the company slides

- would you vote for a launch?
- ignore you know about the consequences

Be keenly aware of the immense PR pressures

- President Reagan's upcoming State of the Union speech
- the first civilian in space
- NASA's funding problems

Launch:

- **No:** OK with a PR disaster & possible budget cuts down the road
- **Yes:** the rocket company is too cautious & concerns are unproven

WHY THE RECOMMENDATION FAILED

Presentation only has exactly two shuttle flights

- one with two blow-by's and high temperature
- one with two blow-by's and low temperature
- ignores all other 22 shuttle flights (SRM)

Statistically weak

Recommendation

- "O-ring temp must be $> 53^{\circ}\text{F}$ at launch"
- is only based on a sample size of 1
- context of other flights is missing
- no statistical leverage

VISUAL ANALYTICS VS. DATA SCIENCE

MODERN DATA SCIENTIST

21st century, requires a mixture of multidisciplinary skills ranging from computer science, communication and business. A modern data scientist is, is equally hybrid. The modern data scientist really is:

MATH & STATISTICS

- ☆ Machine learning
- ☆ Statistical modeling
- ☆ Experiment design
- ☆ Bayesian inference
- ☆ Supervised learning: decision trees, random forests, logistic regression

DOMAIN KNOWLEDGE & SOFT SKILLS

- ☆ Passionate about the business
- ☆ Curious about data
- ☆ Influence without authority
- ☆ Hacker mindset
- ☆ Problem solver
- ☆ Strategic, proactive, creative, innovative and collaborative

PROGRAMMING & DATABASE

- ☆ Computer science fundamentals
- ☆ Scripting language e.g. Python
- ☆ Statistical computing packages, e.g., R
- ☆ Databases: SQL and NoSQL
- ☆ Relational algebra
- ☆ Parallel databases and parallel query

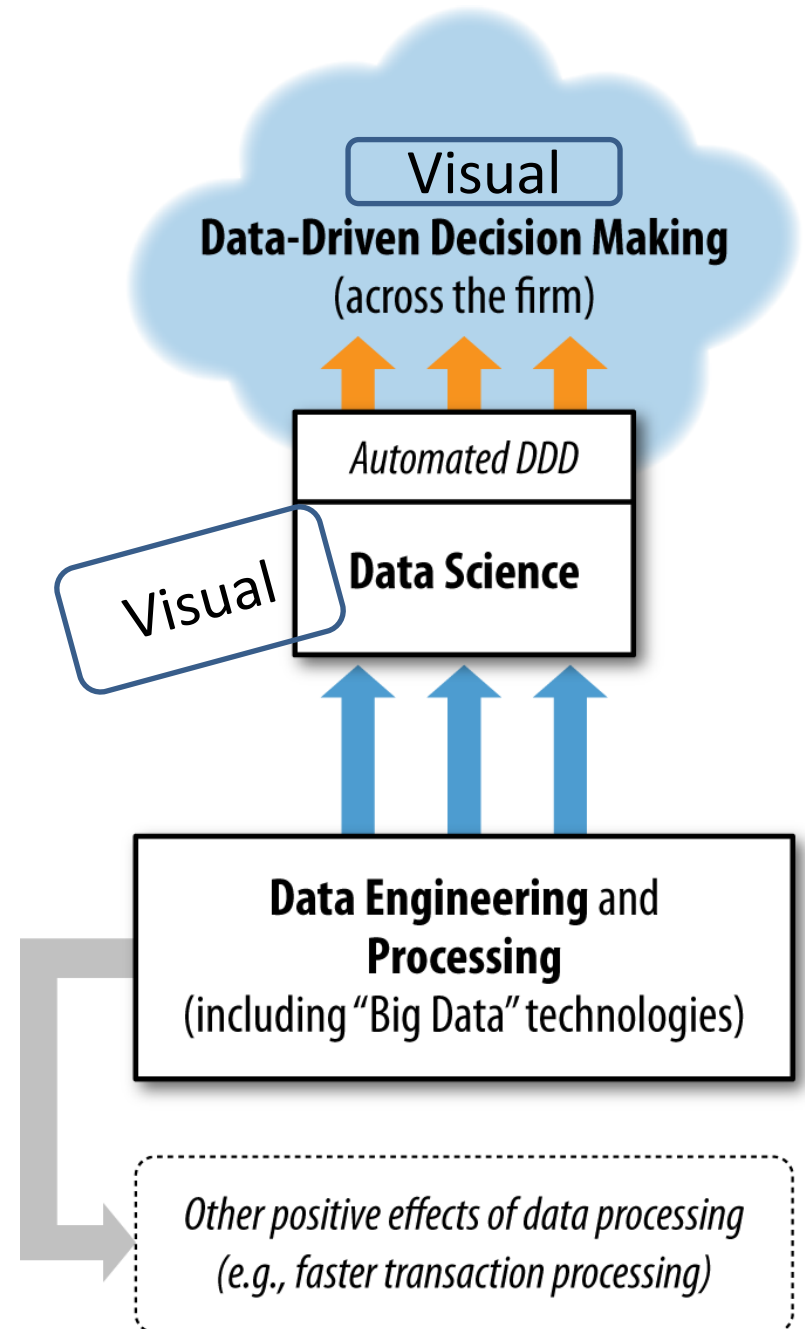

COMMUNICATION & VISUALIZATION

- ☆ Able to engage with senior management
- ☆ Story telling skills
- ☆ Translate data-driven insights into decisions and actions
- ☆ Visual art design
- ☆ R packages like ggplot or lattice
- ☆ Knowledge of any of visualization tools e.g. Flare, D3.js, Tableau

VDDD =

Make decisions based on data

- not purely on intuition and long business experience
- use a combination of these

EXPLAINABLE AI (XAI)

XAI allows users to understand the decisions a model makes

- visualization plays a big role in XAI and IAI (next slide)

Examples: SHAP and LIME

- present the factors that were used for a particular decision
- show how much they played a role and in what direction
- do not explain the mechanics on the decision was reached

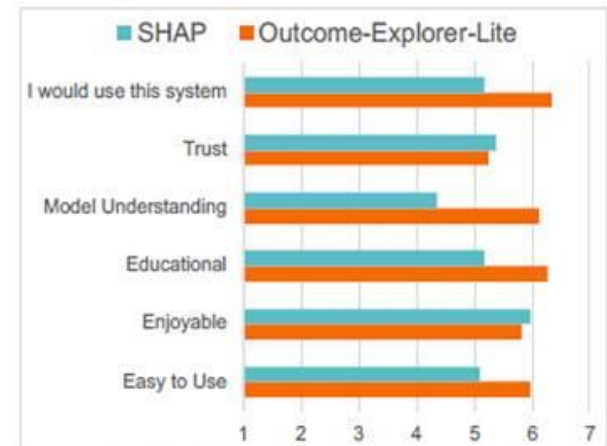

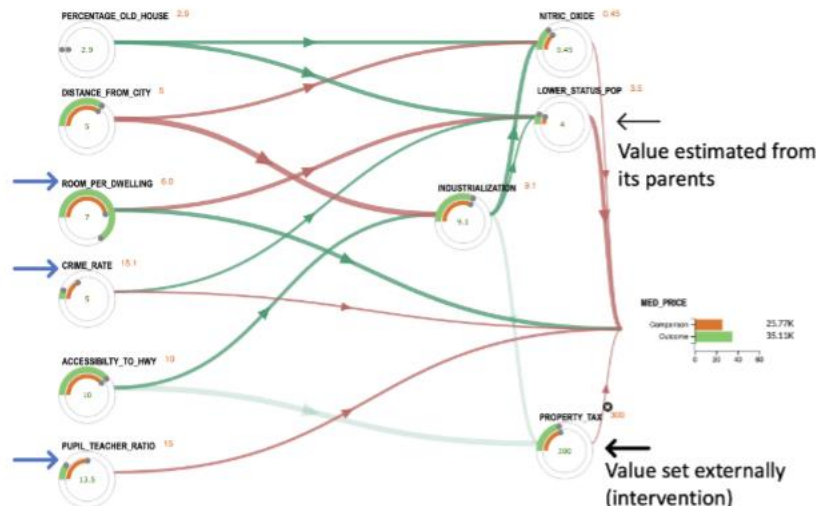

INTERPRETABLE AI (IAI)

Allows users understand the mechanics of the decision process

- users see the broader picture and not just a local one
- pretty impossible to achieve with neural networks and so on because the mechanics are too complex

For example, causal models are inherently interpretable

THE POWER OF THE VISUAL SYSTEM

The human visual system is not perfect, but it's extremely powerful

Vision is an integral part of life

Vision is the gateway to higher-level regions of the brain

VIRTUAL VS. HYBRID

Currently there are

- 86 students online
- 31 students hybrid

Hybrid students:

- consider moving online if visa status allows
- for simplicity and safety all lectures will be online (zoom)
- midterm exams (2) will be off-line in classroom (be there!)
- final project presentations will be online

Online students:

- stay where you are unless visa requires you otherwise
- all lectures will be online
- midterm exams (2) will be online (same time than in-class exam)
- final project presentations will be online
