ACADEMIC PROJECTS

Preemptive Operating System [CSE-506] *August 2013 - December 2013*

- Developed a pre-emptive kernel OS from scratch.
- This kernel handles user I/O, software and hardware interrupts, system calls, timer based scheduling etc.
- Project URL: <https://github.com/prashantpandey/preemptive-os>

Compiler for Language E- [CSE-504] *February 2014 - May 2014*

- Developed a compiler from scratch for the language E-.
- The project involved lexical analysis, semantic analysis, type checking, intermediate code generation, optimization and machine code generation.
- Project URL: https://github.com/prashantpandey/E--_compiler

Client-Server model using Chain Replication for supporting Fault-Tolerance and High Availability [CSE-535] *August 2014 - December 2014*

- In this course project, we implemented a client-server model for the chain replication algorithm for high-availability and fault-tolerance. It is implemented in two different languages: DistAlgo and NodeJs.
- Project URL: <https://github.com/prashantpandey/ChainReplicationDistributedSystem>

Long Reads Genome Assembly [CSE-549] *August 2013 - December 2013*

- We implemented the first component of a de-novo assembler for long reads obtained from a PacBio RS sequencing machine. <http://schatzlab.cshl.edu/teaching/2013/pacbioasm.shtml#!>
