## Problem of the Day

- Your job is to arrange n rambunctious children in a straight line, facing front. You are given a list of $m$ statements of the form " $i$ hates $j$ ". If $i$ hates j , then you do not want put i somewhere behind j , because then i is capable of throwing something at $j$.
- Give an algorithm that orders the line, (or says that it is not possible) in $\mathrm{O}(\mathrm{m}+\mathrm{n})$ time
