

# CLIENT/SERVER REVIEW PREP

---

CSE416, Section 1

Client/server reviews begin on 3/11

1

CSE416 - Software Engineering © Robert F. Kelly, 2026 2

## C/S Review Times

- Time slots will be posted
- 10 minutes allocated
- Real time grading
- Grading
  - Quality component
  - Presentation component

2

## Quality Grading Rubric

- Initiate execution of a request to the server (use Axios, Window object, or XMLHttpRequest) **Initiate from a realistic page**
- Correct client code making request
- Passing parameter to server – for example, a state identifier for the initial request for a state page
- Correct server method and annotation – URL directs to the Java method
- Return of JSON – can be static JSON file on server, but JSON should contain only data for the requesting use case
- Use JSON to populate GUI – GUI component is realistic, and JSON contains realistic data

3

## Presentation

- Introduce team
- State what the GUI request is
- Execute the interaction
- Show the code in order of execution (page, client request, server controller, client handler)
