

CSE 332
INTRODUCTION TO VISUALIZATION
VISUAL DESIGN & AESTHETICS

KLAUS MUELLER

COMPUTER SCIENCE DEPARTMENT
STONY BROOK UNIVERSITY

| Lecture | Topic | Projects |
|---------|---|---------------|
| 1 | Intro, schedule, and logistics | |
| 2 | Applications of visual analytics, data, and basic tasks | |
| 3 | Data preparation and reduction | Project 1 out |
| 4 | Data preparation and reduction | |
| 5 | Data reduction and similarity metrics | |
| 6 | Dimension reduction | |
| 7 | Introduction to D3 | |
| 8 | Bias in visualization | Project 2 out |
| 9 | Perception and cognition | |
| 10 | Visual design and aesthetics | |
| 11 | Cluster and pattern analysis | |
| 12 | High-Dimensional data visualization: linear methods | |
| 13 | High-D data vis.: non-linear methods, categorical data | Project 3 out |
| 14 | Computer graphics and volume rendering | |
| 15 | Techniques to visualize spatial (3D) data | |
| 16 | Scientific and medical visualization | |
| 17 | Scientific and medical visualization | |
| 18 | Non-photorealistic rendering | Project 4 out |
| 19 | Midterm | |
| 20 | Principles of interaction | |
| 21 | Visual analytics and the visual sense making process | |
| 22 | Visualization of graphs and hierarchies | |
| 23 | Visualization of text data | Project 5 out |
| 24 | Visualization of time-varying and time-series data | |
| 25 | Memorable visualizations, visual embellishments | |
| 26 | Evaluation and user studies | |
| 27 | Narrative visualization and storytelling | |
| 28 | Data journalism | |

THREE KEY VISUAL REPRESENTATIONS

Gestalt Principles:

- the tendency to perceive elements as belonging to a group, based on certain visual properties (top-down attention)

Saliency Map:

- pay attention to interesting detail first and then integrate these features into a scene (bottom-up attention)

Pre-attentiveness:

- certain low level visual aspects are recognized before conscious awareness

Visual variables:

- the different visual aspects that can be used to encode information

GESTALT

Concept of totality

- you grasp the "totality" of something before worrying about the details

SALIENCY MAP

Red: high saliency
Blue: low saliency

Butterfly

Butterfly Saliency Map

Person

Person Saliency Map

CENTER-SURROUND DETECTION

Center-surround receptive fields

- a pool of photoreceptors
- surround has an inhibitory effect

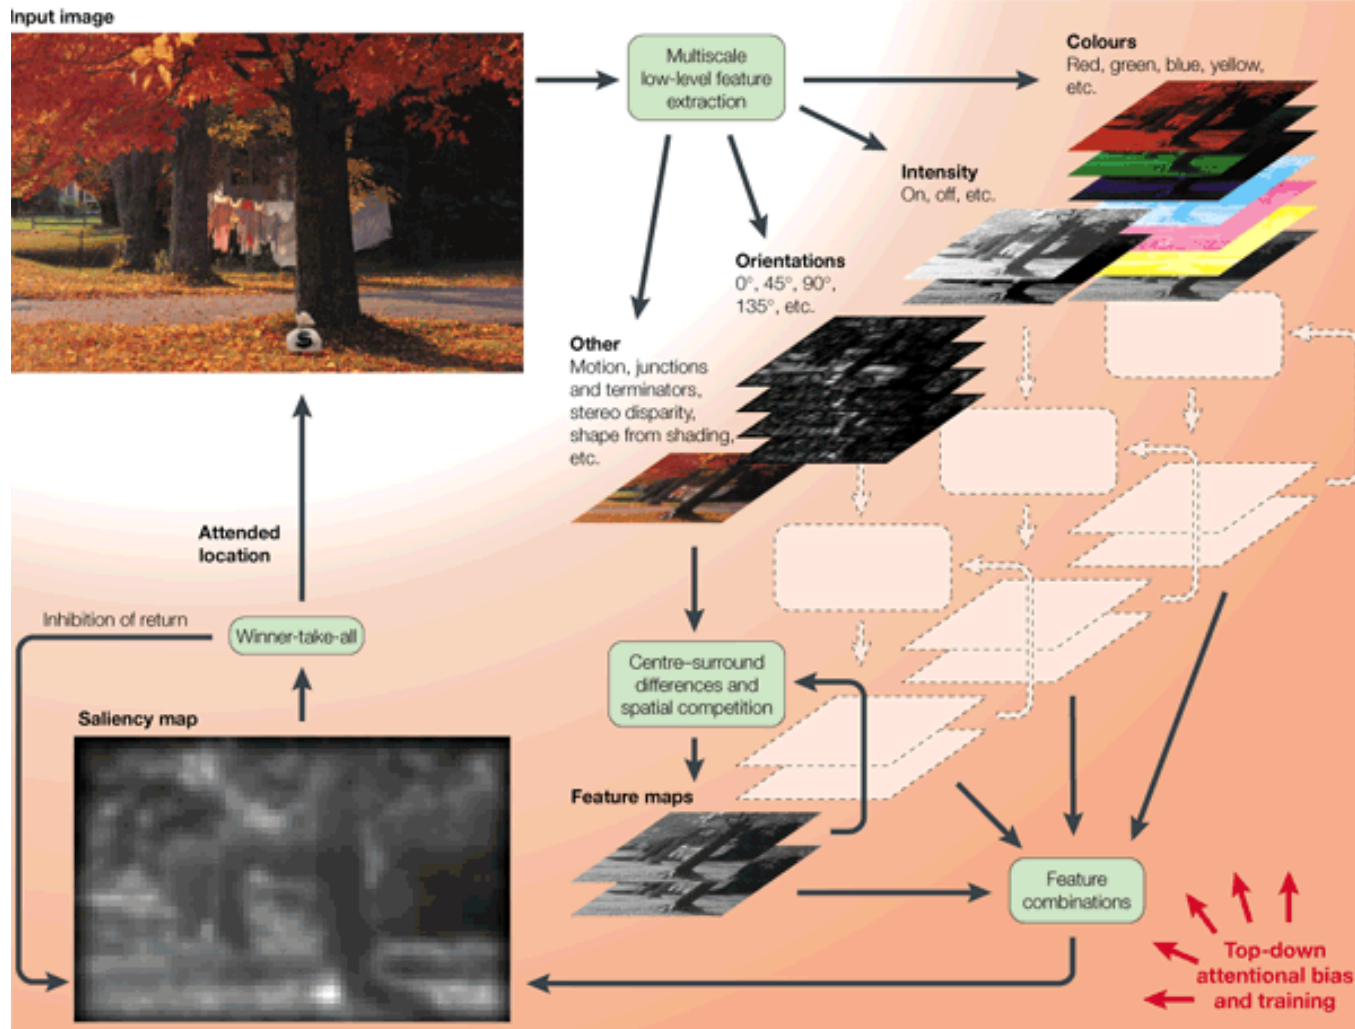

Stronger variant of the Hermann grid

Explanation of Hermann grid

BOTTOM-UP VISUAL ATTENTION

BOTTOM-UP AND TOP-DOWN

Probably occur in conjunction for scene recognition

top-down

bottom-up

Filters

Saliency map

PRE-ATTENTIVENESS

Also called pop-out (multiple conjunctions shown here):

WHICH POPPED-OUT FASTER

Color (red vs. green)

Shape (circle vs. square)

VISUAL VARIABLES

Formal theory linking perception to visualization

Established by Jacques Bertin (1967)

- he called it 'Image Theory'
- original book in French (*Sémiologie Graphique*) translated into English by W. Berg (1983)
- not formally linked to vision research more based on intuition
- but has been shown later by M. Green to be quite accurate

VISUAL VARIABLES

Two planar variables

- spatial dimensions
- map (arm, grip) to (x,y)

Six retinal variables

- size
- color
- shape
- orientation
- texture
- brightness

Retinal variables allow for one more variable to be encoded

- more than three variables will hamper efficient visual search
- recall low decoding speed of conjunctions

ASSOCIATIVE VS. SELECTIVE

Both are nominal qualities

Associative

- lowest organizational level
- enables **visual grouping** of all elements of a variable

Selective

- next lowest level
- enables viewer to **isolate encoded data** and ignore others

VISUAL VARIABLE #1 – PLANAR

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #1 – PLANAR

| Visual property | Can convey |
|-----------------|------------|
| Associative | Y |
| Selective | Y |
| Ordered | Y |
| Quantitative | Y |

VISUAL VARIABLE #2 – SIZE

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #2 – SIZE

| Visual property | Can convey |
|-----------------|------------|
| Associative | Y |
| Selective | Y |
| Ordered | Y |
| Quantitative | (Y) |

VISUAL VARIABLE #3 – BRIGHTNESS

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #3 – BRIGHTNESS

| Visual property | Can convey |
|-----------------|------------|
| Associative | Y |
| Selective | Y |
| Ordered | Y |
| Quantitative | |

VISUAL VARIABLE #4 – TEXTURE

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #4 – TEXTURE

| Visual property | Can convey |
|-----------------|------------|
| Associative | Y |
| Selective | Y |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #4 – COLOR

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #4 – COLOR

| Visual property | Can convey |
|-----------------|------------|
| Associative | Y |
| Selective | Y |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #5 – ORIENTATION

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #5 – ORIENTATION

| Visual property | Can convey |
|-----------------|------------|
| Associative | (Y) |
| Selective | (Y) |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #6 – SHAPE

| Visual property | Can convey |
|-----------------|------------|
| Associative | |
| Selective | |
| Ordered | |
| Quantitative | |

VISUAL VARIABLE #6 – SHAPE

| Visual property | Can convey |
|-----------------|------------|
| Associative | (Y) |
| Selective | (Y) |
| Ordered | |
| Quantitative | |

LEVELS OF ORGANIZATION

Visual variables differ in what data properties they can convey

| | Associative | Selective | Ordered | Quantitative |
|--------------------|-------------|-----------|---------|--------------|
| Planar | yes | yes | yes | yes |
| Size | yes | yes | yes | (yes) |
| Brightness (Value) | yes | yes | yes | |
| Texture | yes | yes | | |
| Color (Hue) | yes | yes | | |
| Orientation | (yes) | (yes) | | |
| Shape | (yes) | (yes) | | |

TAKE-AWAYS (1)

Planar variable is the single most strongest visual variable

- maps to proximity
- provides an intuitive organization of information
- things close together are perceptually grouped together

TYPICAL WEB FORM

| [Cancel](#)

PRIMARY ACTION | SECONDARY ACTION

TAKE-AWAYS (2)

Size and brightness are good secondary visual variables to encode *relative* magnitude

- size appeals to spatial perceptive channels

What are the advantages and disadvantages of brightness

- + brightness does not consume extra space (bigger disks do)
- brightness depends on environmental lighting (size does not)
where do you view the visualization (office, outdoors, night or day?)

TAKE-AWAYS (3)

Color is a good visual variable for labeling

- texture can do this as well, but it does not support pop-out much

color pop-out

texture pop-out?

TAKE AWAYS (4)

Shape provides only limited pop-out

- compare with color pop-out on the previous slide
- another example: coloring of graphs

VS.

COLOR AND CONTRAST

Background with same-colored object at the same brightness

- can you see the shape?
- can you count the number of gaps?

COLOR AND CONTRAST

Background with different-colored object at similar brightness

- can you see the shape?
- can you count the number of gaps?

COLOR AND CONTRAST

Background with different-colored object at lower brightness

- can you see the shape?
- can you count the number of gaps?

COLOR AND CONTRAST

Background with different-colored object at higher brightness

- can you see the shape?
- can you count the number of gaps?

WHAT DID WE LEARN FROM THAT EXPERIMENT?

Color is for ...

Brightness (intensity, luminance) is for ...

COLOR TAGGING FOR IMPORTANCE

Which is the most important structure in each (as intended by the author)

HOW ABOUT AESTHETICS?

Which one do people like better?

- perceived importance level of red object is the same

Vis 1

Vis 2

COLOR CODING AND COLORMAPS

- Color coding
 - large areas: low saturation
 - small areas: high saturation
 - maintain luminance contrast
 - break iso-luminances with borders
- Pseudo-coloring: assign colors to grey levels by indexing the grey levels into a color map

COLOR CODING AND COLORMAPS

- Color coding
 - large areas: low saturation
 - small areas: high saturation
 - maintain luminance contrast
 - break iso-luminances with borders
- Pseudo-coloring: assign colors to grey levels by indexing the grey levels into a color map

hue

SPIRAL THROUGH COLOR SPACE

Varies hue and intensity at the same time

- shown here: CIE Lab color space

THE RAINBOW COLORMAP

As we saw, colors can add detail information to a visualization

- instead of 256 levels get $256^3 = 16,777,216$

Oftentimes you have a visualization with just one variable

- this would give you a grey level image
- how to turn this into a color image for better detail

Solution 1:

- map to hue → the rainbow colormap

- can you see all adjacent colors at the same contrast?

AVOID RAINBOW COLORMAPS

BETTER: LINEAR HUE

The image displays a software interface for "Jet Engine Noise Simulation". The main window shows a 2D plot of density with a color scale ranging from 0.4 to 2.4. The plot is titled "Jet Engine Noise Simulation" and has a menu bar with "File", "Execute", "Windows", "Connection", "Options", and "Help". The plot shows a jet engine nozzle with a density gradient from blue (low density) to yellow (high density). The X-axis ranges from 0 to 50, and the Y-axis ranges from -8 to 8. A color bar below the plot shows the density scale.

On the left side, there is a "Categories" panel with a tree view showing "PRAVDAColor" selected. Below it is a "PRAVDA Tools" panel with three color maps labeled "Map 1", "Map 2", and "Map 3". The "PRAVDA Tools" panel also lists various tools like "AutoRuleColor", "ColorMapLookup", "ColorMapPicker", "PRAVDAColor", "RuleColor", "ScaleColorMapData", "Spatial Freq", and "Width".

At the bottom right, there is a "Control Panel" window with a menu bar and a "Coloring Task" dropdown menu set to "Isomorphic".

EFFECTIVE USE OF RAINBOW COLOR MAPS

Wait, did I not tell you that rainbow color maps are bad?

- actually, they can be useful if the intervals are carefully chosen

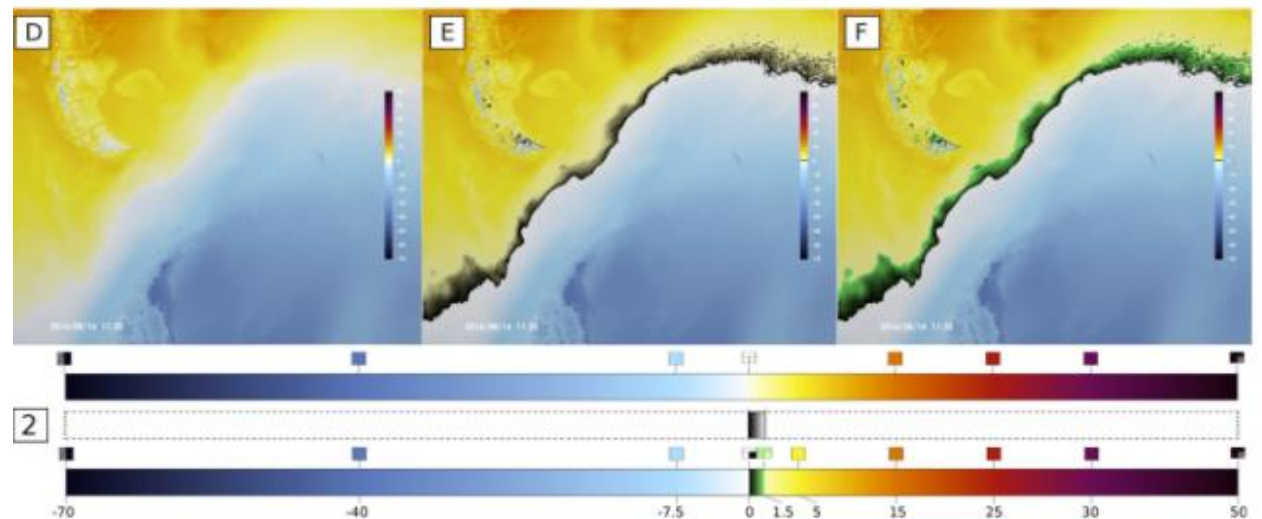

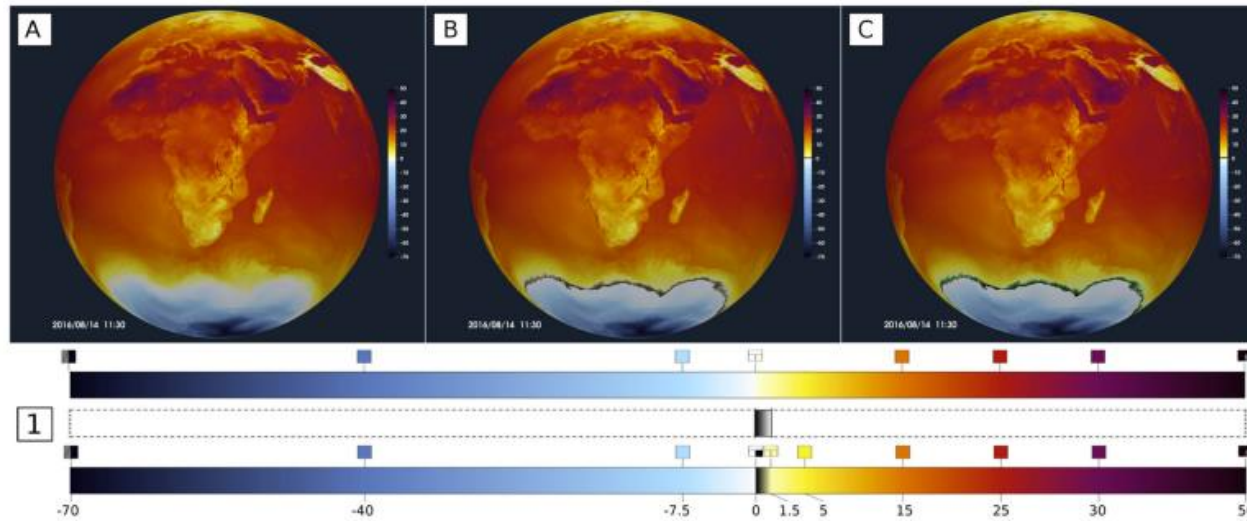

Fig. 15. Scientists examine multiple variables in order to gain an understanding into the locations and quantities where ancient water was likely to have formed. CCC-Tool color bar locations are crafted to highlight the data ranges for each variable that is conducive to water formation, enabling scientists to easily recognize and compare the locations over multiple variables and time steps.

MORE PURPOSEFUL RAINBOW COLOREMAPS

EXPLANATION FOR LAST SLIDE

At the example of the 2m-temperature of a high resolution simulation with the global atmosphere model ICON, the figure illustrates the use of probes to inspect small sub-ranges of the global data range. The rendering on the left (A) shows the the global temperature distribution with colormapping using a CMS (inset 1, top) that was designed to resolve the data range from -70 to 50C. However, within small sub-regions, as shown in a close-up (D), only a small section of the CMS is used and local structures are hardly visible. In order to probe the temperature range 0 - 1.5C in more detail, we added single probe at 0C to compose a CMS (1, bottom) that creates an isoline-like-structure to highlight the freezing point and the data range above. The images (B) and (E) show the result for a One-Sided-Transparent-Probe. The according colormap composition is shown in inset (1). Similarly, (C) and (F) show the according renderings for One-Sided-Probe according to the definition shown in inset (2, middle). (1: Top: Divergent CMS for the 2m-temperature. Middle: one sided transparent probe for the range 0 - 1.5C. Bottom: resulting colormap. 2: One sided probe without transparency.)

MORELAND'S DIVERGING COLORMAPS

Algorithmically generated

- all have the same midpoint value (0.865, 0.865, 0.865)
- begin and end point listed here

<https://www.kennethmoreland.com/color-maps/>

BREWER SCALES

Nominal scales

- distinct hues, but similar emphasis

Sequential scales

- vary in lightness and saturation
- vary slightly in hue

<http://colorbrewer2.org/>

Diverging scale

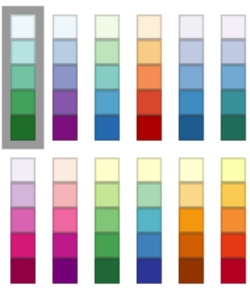

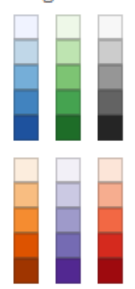

- complementary sequential scales
- neutral at "zero"

COLORBREWER 2.0
color advice for cartography

OPPONENT COLOR

Definition

- Achromatic axis
- R-G and Y-B axis
- Separate lightness from chroma channels

First level encoding

- Linear combination of LMS
- Before optic nerve
- Basis for perception
- Defines "color blindness"

Add Opponent Color

- Dark adds light
- Red adds green
- Blue adds yellow

These samples will have both light/dark and hue contrast

Opponent colors do not mix

- can only see one of the opponents
- there is no blueish yellow
- there is no reddish green

COLOR BLINDNESS

Most common is deficiency in distinguishing red and green

FORMS OF COLOR BLINDNESS

normal

The colors of the rainbow as viewed by a person with no color vision deficiencies.

green missing

The colors of the rainbow as viewed by a person with deuteranopia.

red missing

The colors of the rainbow as viewed by a person with protanopia.

blue missing
(rare)

The colors of the rainbow as viewed by a person with tritanopia.

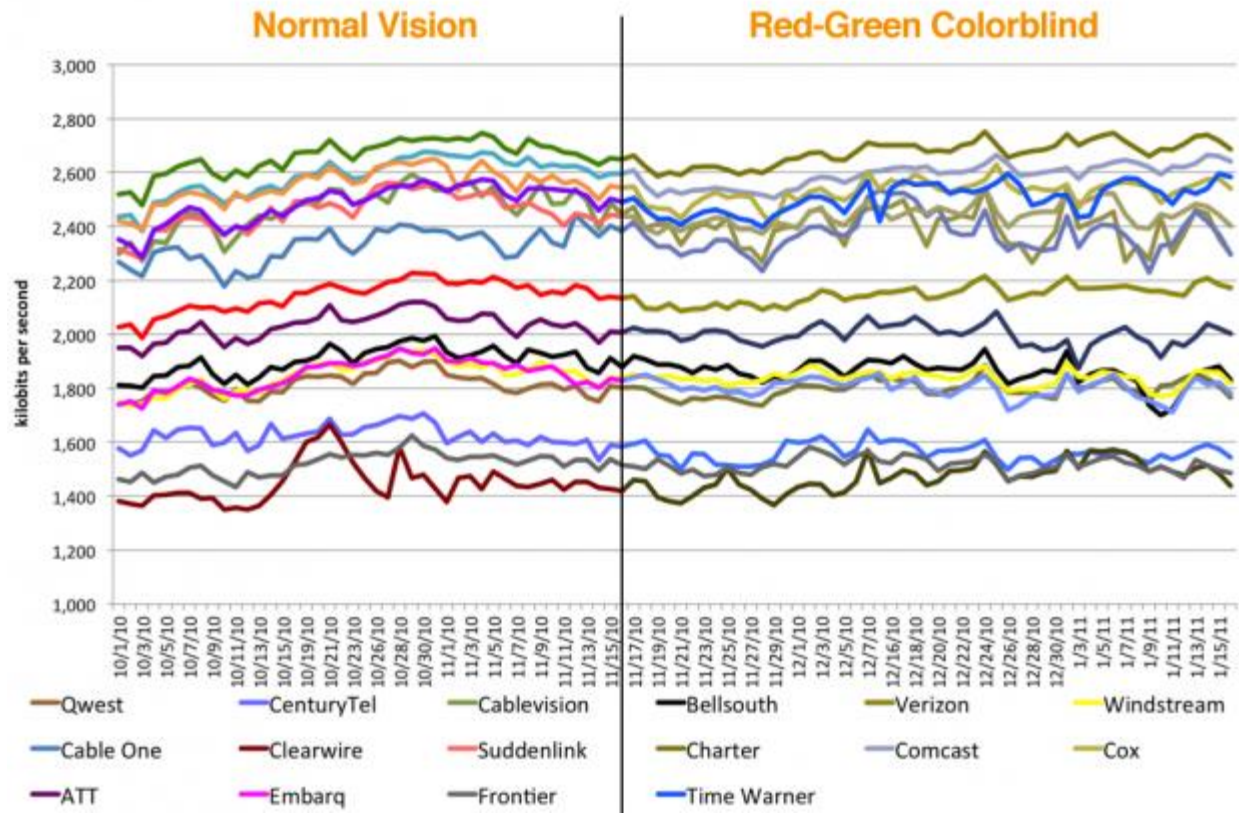

ISHIHARA TEST

normal

protanopia

LINE CHARTS

DESIGNING FOR COLOR DEFICIENT USERS

8% (0.5%) of US males (females) are color deficient

- so be careful when designing visualizations

What to do?

- use different intensities for red-green (e.g. light green, dark red)
- space red and green colored colors dots far apart or make large
- add symbols to line charts or vary line style
- avoid using gradient colors to indicate data value

SUMMING UP

Use Luminance for detail, shape, and form

Use color for coding – few colors

Use strong colors for small areas

Use subtle colors to code large areas

Visualization artistry:

- Use of luminance to indicate direction
