

# Discrete Mathematics

## ( $\text{\LaTeX}$ )

Pramod Ganapathi

Department of Computer Science  
State University of New York at Stony Brook

January 24, 2021

# What is $\text{\LaTeX}$ ?

## Definition

- $\text{\LaTeX}$  is pronounced as lay-tech
- $\text{\LaTeX}$  is a document formatting system used to create professional-looking documents
- $\text{\LaTeX}$  is free
- $\text{\TeX}$  (the core of  $\text{\LaTeX}$ ) is created by Donald Knuth  
 $\text{\LaTeX}$  (a wrapper on  $\text{\TeX}$ ) is created by Leslie Lamport
- $\text{\LaTeX}$  documents look aesthetically beautiful
- $\text{\LaTeX}$  uses mathematical formulas to typeset characters

# Where is $\text{\LaTeX}$ used?

## Applications

- $\text{\LaTeX}$  is extensively used to write research papers, technical articles and reports, and scientific books
- $\text{\LaTeX}$  is also used to write resumes, CVs, homework assignments, exams, software documentations, posters, flyers, and slideshows

# Why learn L<sup>A</sup>T<sub>E</sub>X?

## Motivation

- To write beautiful mathematics
- To create nice tables
- To create systematic bibliographies
- To create consistent layout
- To automate document preparation
- To make use of a huge number of packages

# Why learn L<sup>A</sup>T<sub>E</sub>X?

## Motivation

- To write beautiful mathematics
- To create nice tables
- To create systematic bibliographies
- To create consistent layout
- To automate document preparation
- To make use of a huge number of packages

## Most important motivation

- L<sup>A</sup>T<sub>E</sub>X separates content and presentation
- User can focus only on content and can use an existing template for presentation

# What is the history of $\text{\LaTeX}$ ?

Time	Event
1960s	Tools to write books were largely handled by publishers who used platform-dependent proprietary software
1968-78	Donald Knuth, the father of the analysis of algorithms, works for 10 years to create a platform-independent and completely free digital typographical system called $\text{\TeX}$
1978	Knuth releases $\text{\TeX}$ ; Knuth says: " $\text{\TeX}$ is intended for the creation of beautiful books - and especially for books that contain a lot of mathematics."
1985	Leslie Lamport releases $\text{\LaTeX}$ , which is a wrapper on $\text{\TeX}$ , to make the features easily accessible
1986	Lamport agrees to hand over the maintenance and development to the $\text{\LaTeX}$ project team
1994	$\text{\LaTeX}2e$ is released
Now	$\text{\LaTeX}3$ is being developed

# How to obtain L<sup>A</sup>T<sub>E</sub>X?

## Source

- Online: <https://www.overleaf.com>
- Offline: Install (on Windows, Linux, Mac)
  1. MiK<sup>T</sup>eX - a L<sup>A</sup>T<sub>E</sub>X system
  2. TeXstudio - a beautiful editor
