Dear Recruiter:

My passion for application development started during my undergraduate studies, where I got chance to develop web application for our intra-college technical symposium. I got excited to see many candidates using the application I developed to register for the event, it gave me satisfaction and I decided to build my career in developing applications which can benefit large amount of users. During my 2.5 years work span at IBM, I worked as full stack application developer involving in all phases of software development life cycle (gathering/analyzing requirements, designing, developing, testing and deployment). My interests in higher studies made me to pursue MS at Stony Brook University and during which I got chance to work as Senior Research Aide at CA Technologies and Graduate Research Assistant at CS Department.

The job responsibilities of the **Software Engineer/Developer** matches my interests and I am very much interested to be part of the team. At your company, I am looking forward to work on cutting edge technologies, interact with smart engineers, having many consumers of the application or product I develop and to continue my passion as full-time job.

I have strong belief in the saying: *work hard, have fun and create impact*. I kindly request you to have a look at my resume or website and give me a chance to introduce more about myself and my projects.

Sincerely,

Sreevathsan Ravichandran
