

Xiaojun Bi (August 2021)

Assistant Professor
Department of Computer Science
Stony Brook University

xiaojun@cs.stonybrook.edu

My research in Human Computer Interaction (HCI) focuses on two directions: (1) create mathematical models to understand, explain, and predict users' interaction with computers, and (2) leverage these models to research and develop *intelligent* input technologies that can infer and execute users' interaction intents from noisy input signals. My work particularly centers on mobile devices as they are now the major personal computing platform.
